Cover photo. Chimeric enteric ganglion derived from chick and quail neural crest cells forming in the chicken distal midgut grown in organ culture. Quail cells are identified in green with the mouse IgG QCPN antibody, and neurites are labelled in blue with rabbit anti-neurofilament antibody. The red labelling is mouse IgM HNK-1 antibody for neural crest cells, with the color contrast sharpened to show only the most strongly stained cells.

See the article by Simpson et al., pages 553–568, in this issue.

Publication information: *Developmental Biology* [ISSN 0012-1606]. For 2007, Volumes 301–312 are scheduled for publication. Subscription prices are available upon request from the Publisher, from the Regional Sales Office nearest you, or from this journal's website (<http://www.elsevier.com/locate/ydbio>). Further information is available on this journal and other Elsevier products through Elsevier's website <http://www.elsevier.com>. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by standard mail (surface within Europe, air delivery outside Europe). Priority rates are available upon request. Claims for missing issues should be made within six months of the date of dispatch.
